Model Risk Estimation

Condition	Model Status	Risk Score
Stress	Abnormal	61.3%
Anxiety	Abnormal	51.9%
Depression	Abnormal	51.8%

Stress / Anxiety / Depression Score are the reference values supplied for this recording; Model Risk Score is the estimate produced by the model.
These results are model-based estimates from EEG/PPG signals and do not replace a clinical diagnosis.

EEG Topographic Brain Maps

Scalp distribution of power, asymmetry, complexity and spectral indices across the 8 channels.

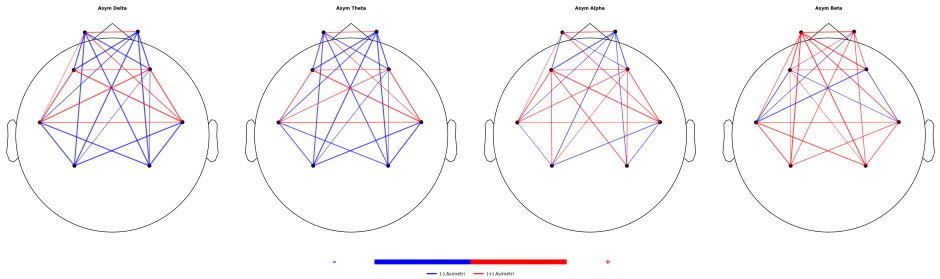

Absolute Power (µV²)

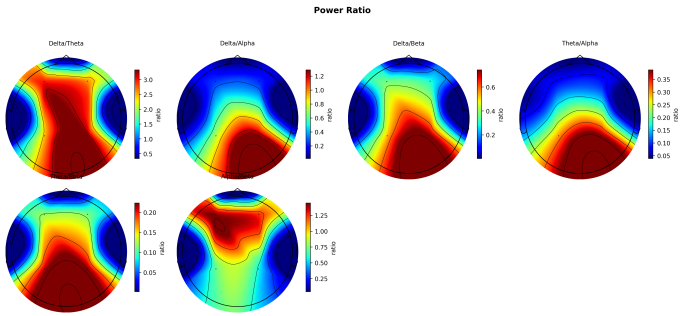

Relative Power (unitless, 0 to 1)

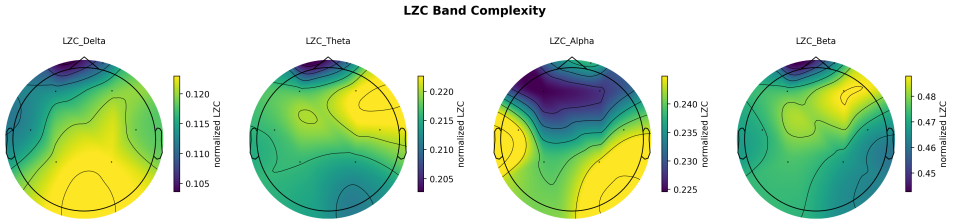

Amplitude Asymmetry (L-R)/(L+R), unitless

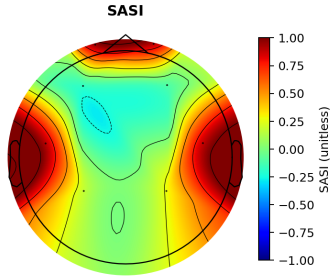

Power Ratio (unitless)

LZC Complexity (normalized, unitless)

SASI - Spectral Asymmetry Index (unitless, -1 to +1)

Units: Absolute Power is band power in µV² (integral of the PSD over the band); Relative Power, Power Ratio, Asymmetry, LZC and SASI are dimensionless indices.
